EXPERIENCE

GHA (M&A ADVISORY)

New York, NY

Business Intelligence & Automation Analyst

Mar 2026 - Jun 2026

- Developed an LLM outreach automation agent using Claude API and live CRM data, cutting manual messaging time by 90% across 15,000+ contacts
- Designed a multi-workflow classification system using hierarchical signal logic to auto-segment and tag 45,000+ CRM records, automating a manual reporting workflow and eliminating hand tagging
- Resolved a critical pipeline data integrity issue by redesigning record-level processing logic, preventing overwrites across 20,000+ records

COLUMBIA UNIVERSITY IRVING MEDICAL CENTER

New York, NY

Data Analytics Intern

Jun 2024 - Sep 2024

- Built Power BI KPI dashboards translating clinical data into weekly reporting adopted by 2 senior leaders for recurring decisions
- Optimized ETL workflows and dashboards for large clinical datasets, reducing processing time by 30%
- Applied statistical analysis across 4 datasets to identify and resolve integrity issues, improving data accuracy by 20%

PROJECTS

BANK STATEMENT EXTRACTION AGENT - LangGraph, Claude API, Python, openpyxl - github.com/marinasofia/statement-agent

- Architected a 6-node LangGraph StateGraph agent that ingests PDF bank statements, extracts structured financial data via Claude API, validates with Pydantic v2, and outputs deduplicated Excel reports organized by statement month
- Implemented a self-healing validation loop: on schema failure, the agent fires a corrective prompt and retries automatically before escalating to human review
- Built a multi-tenant YAML config system with per-client overrides and a format discovery module that auto-generates extraction configs; hardened inputs against prompt injection and added concurrent batch processing via ThreadPoolExecutor

EQUITY SQL ANALYTICS - MySQL - github.com/marinasofia/equity-sql-analytics

- Built a MySQL equity-analytics suite: an S&P 500 screener combining Sharpe ratio, annualized volatility, and P/E and debt-to-equity filters across 492 constituents (multi-CTE, window functions)
- Ran an RSI signal backtest over 4,000+ NVIDIA trading days; detected and corrected look-ahead bias in the naive approach and benchmarked win rates against the true base rate

BANK CHURN PREDICTION MODEL - Python, pandas, scikit-learn

- Built a customer churn model for 10,127 credit-card customers: removed embedded target leakage, handled 16% class imbalance with class weighting, and delivered recall-precision threshold analysis (up to 89% churning recall, ROC-AUC 0.87) to size retention campaigns

SKILLS

- **BI & Delivery:** Power BI, Tableau, Matplotlib, Streamlit, Excel (pivot tables, XLOOKUP, INDEX MATCH, dynamic models), Google Sheets API, BeautifulSoup, openpyxl, Microsoft Fabric, GitHub, process documentation
- **Data Engineering & Analytics:** Python, SQL (BigQuery, MySQL, PostgreSQL), ETL pipelines, pandas, NumPy, data extraction & validation, statistical analysis
- **AI Engineering:** Claude API (Anthropic), OpenAI API, LangGraph, LLM agent development, RAG, prompt engineering, workflow automation, CRM data integration
- **Languages:** English, Spanish, Russian (all fluent)

EDUCATION

BARUCH COLLEGE (CUNY) - ZICKLIN SCHOOL OF BUSINESS

New York, NY

Computer Information Systems, BBA (STEM)

Expected May 2027

GPA: 3.5; Dean's List 2025-2026

TECH TALENT PIPELINE RESIDENCY (CUNY)

New York, NY

Selective data analytics bootcamp: Python, pandas, SQL, statistics, ML fundamentals

Jun 2026 - Aug 2026

- Pitched a capstone project to a panel of industry tech experts; engaged directly with practitioners through employer site visits and professional speaker sessions
